

Always working hard to develop new and fresh concepts

“Produced in collaboration with a large European bank, the **Protirus App Store** moves away from traditional software deployment.”

Protirus App Store is an endpoint client residing in the user's task tray, with an intuitive interface allowing a user to view installed software, post requests for new installs, track progress of requests, update existing software and remove or re-install existing software. An administrator is able to publish available software, and Workflow integration supports custom approval processes.

Features

- Automate your software approval and publishing processes
- Extend your license and asset tracking capabilities
- Reduce costs though automating Software requests
- Extend your starter / leaver capabilities
- Utilises Symantec Workflow
- Multi-language support
- Records full history of Software requests
- Gives view of currently installed and available software by User / Workstation
- Exposes current status of local installations, allowing improved information reporting for Service desk requests
